Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 31/01/2022 TO 18:00HRS Tue 01/02/2022

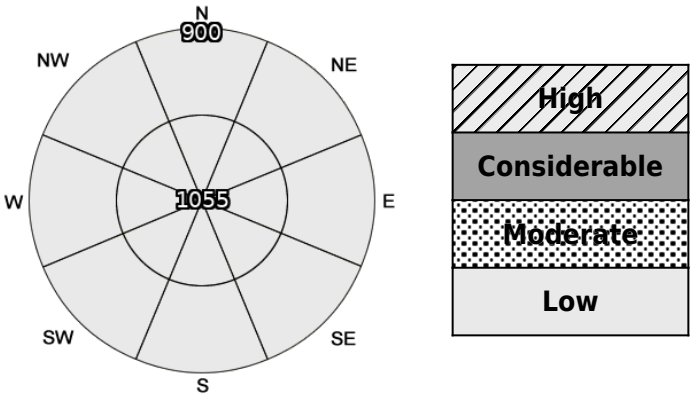
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 01/02/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Thaw conditions will prevail. Any remaining superficial snow cover and shallow accumulations will quickly dissipate as the freezing level rises above the summits. A light dusting of summit snow will fall throughout the afternoon. Any remaining isolated patches of old snow will become moist, but will remain stable throughout. The avalanche hazard will be Low.



Forecast Weather Influences

Heavy overnight rain will ease into wintery showers with snow above 900 metres later as the freezing level lowers. Winds will be strong, West-South-Westerly veering West-North-West in the afternoon. The freezing level will be above the summits overnight, gradually dropping to 900 metres by the end of the day.
