Southern Cairngorms

Issued 02/02/2022

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 02/02/2022 TO 18:00HRS Thu 03/02/2022

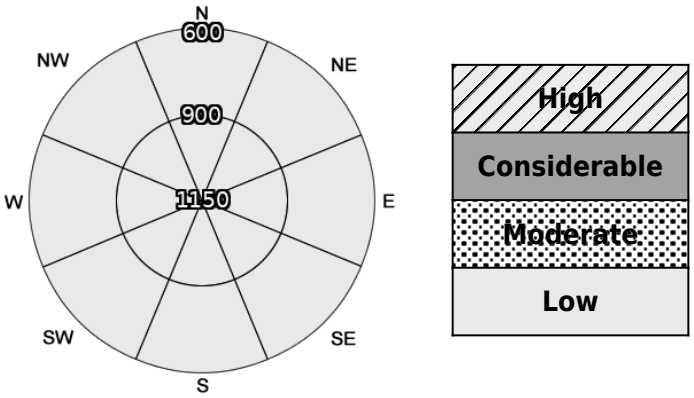
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 03/02/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The remaining patchy snow will continue to slowly thaw but will remain well bonded and stable. Largest amounts will be encountered in steep, wind sheltered locations on North to East aspects above 900 metres. Elsewhere there will be very small patches of snow or bare ground. The avalanche hazard will be Low.



Forecast Weather Influences

Persistent light rain throughout the period, only turning to sleet and then snow on the highest summits at the end of the day. Strong West-South-Westerly winds overnight, increasing to gale force South-Westerly from mid-morning. The freezing level will lower to around 1300 metres during the day.

Comments

An unpleasant mountain day expected on Thursday with precipitation and increasingly strong winds.
