FOR PERIOD 18:00HRS Fri 04/02/2022 TO 18:00HRS Sat 05/02/2022

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 05/02/2022

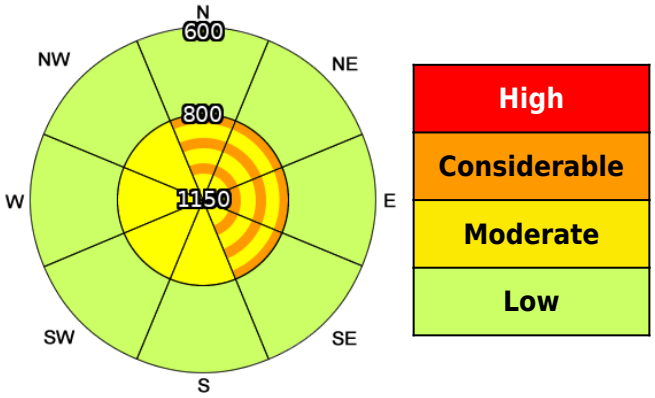
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to build on North-East to South-East aspects above 650 metres, especially in wind sheltered locations such as gully exits and corrie rims. Cross loading will affect North and South aspects. Cornices will continue to build and will be fragile. The avalanche hazard will be Considerable.



Forecast Weather Influences

Gale force West-North-Westerly winds overnight, backing South-West, then veering Westerly during the day. Overnight freezing level 300 metres, rising to 800 metres in the morning, lowering to 300 metres by the end of the day. Scattered snow showers will continue overnight, rain below 800 metres for a few hours during the morning, then snow for the rest of the period.

Comments

A thankful return to winter.
