Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 20/02/2022 TO 18:00HRS Mon 21/02/2022

THE AVALANCHE HAZARD WILL BE MODERATE

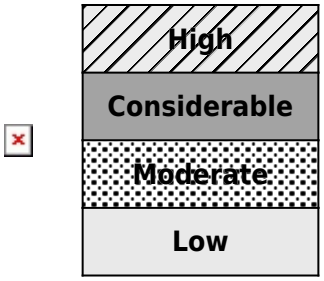
Avalanche Hazard Forecast for Monday 21/02/2022

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The existing moist snowpack will continue to consolidate and refreeze forming a surface crust. Fresh accumulations of windslab will begin to accumulate during the night on North through East to South-East aspects above 800 metres. These accumulations are not expected to be large in extent and localised around corrie rims and the tops of gullies. The avalanche hazard will be Moderate.



Forecast Weather Influences

After a cold start to the night the freezing level will rise to around 800 metres by midnight and remain at that level for the forecast period. Overnight snow on strong South-Westerly winds will moderate by daybreak as the winds veer to the North-West and decrease in strength.
