Avalanche Hazard Forecast

Issued 05/02/2022

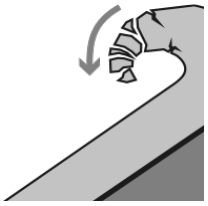
FOR PERIOD 18:00HRS Sat 05/02/2022 TO 18:00HRS Sun 06/02/2022

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 06/02/2022

Avalanche Problems

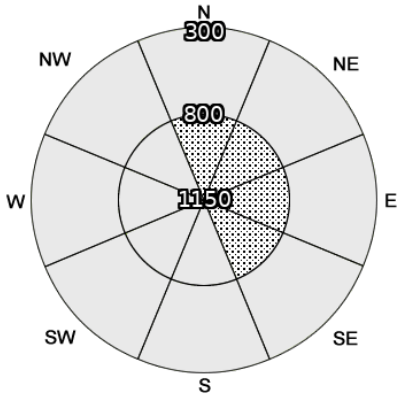
Wind Slab

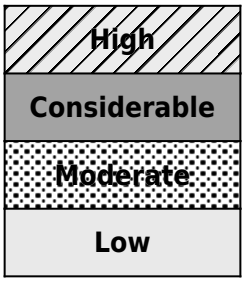


Cornices

Forecast Snow Stability & Avalanche Hazard

Poorly bonded windslab will continue to accumulate throughout the forecast period on mainly North through East to South-East aspects above 800 metres. Steep wind sheltered locations such as coire rims, gully tops and ridge flanks will be particularly affected, where deepening drifts will contain instabilities. New cornices will be fragile and prone to collapse. Outwith these locations new snow will lie on bare ground; wind exposed slopes will be icy. The avalanche hazard will be Moderate.





Forecast Weather Influences

The freezing level will be around 300 metres. Snow is expected above 200 metres for the duration of the forecast period. Winds will be gale force and mainly from the West, veering West-North-Westerly in the afternoon.

Comments

An unsettled outlook with fluctuating temperatures for the days ahead.
