Avalanche Hazard Forecast

Issued 07/03/2022

FOR PERIOD 18:00HRS Mon 07/03/2022 TO 18:00HRS Tue 08/03/2022

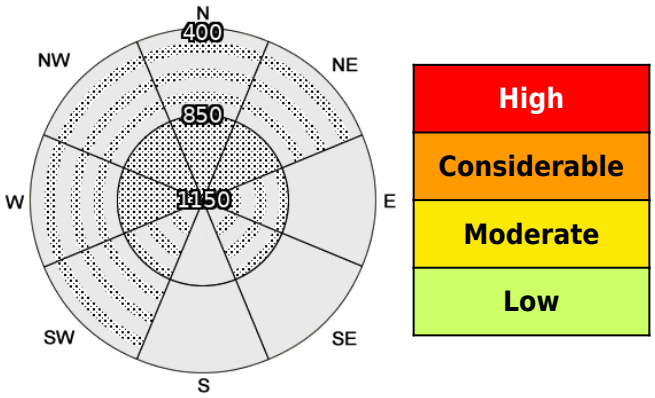
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 08/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will be stable and well bonded throughout. There will be some surface softening where influenced by the sun. Greatest snow cover will be found on North through East to South-East aspects above 750 metres. Below this height, the snowpack will be patchy. The avalanche hazard will be Low.



Forecast Weather Influences

A dry day with winds gradually increasing to gale force from the South-East. Freezing level around 600 metres with temperature inversion conditions prevailing.

Comments

A very firm and icy snowpack exists especially first thing before the sun softens up the top layer. A bracing wind on exposed ridges.
