Avalanche Hazard Forecast

Issued 14/02/2022

FOR PERIOD 18:00HRS Mon 14/02/2022 TO 18:00HRS Tue 15/02/2022

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 15/02/2022

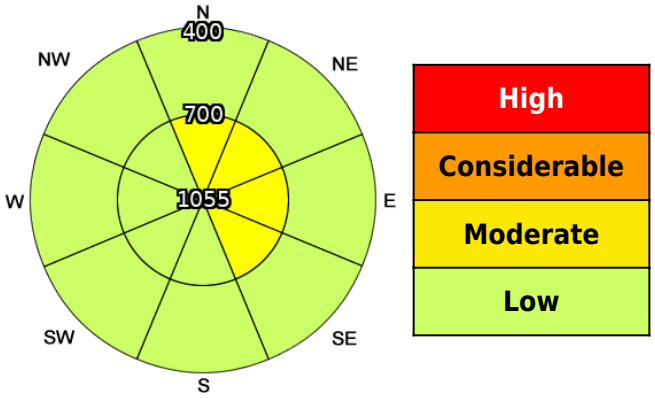
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised areas of unstable windslab will develop mostly on North through East to South-East aspects above 700 metres. Locations most affected will be steep wind sheltered terrain such as corrie rims and gully tops. Cornices will build above the same aspects. Below 600 metres, the new snow will lie mostly on bare ground. The avalanche hazard will be Moderate.



Forecast Weather Influences

There will be a period of snow pre dawn, then wintry showers through the day. Snow will generally be lying above 300 metres at the end of the forecasting period. The freezing level will fluctuate around 500 metres. Light Southerly winds will strengthen overnight to reach strong, then veer, becoming West by daybreak.

Comments

Wintry conditions due to return, with snow lying to lower levels.
