Avalanche Hazard Forecast

**Issued 22/02/2022**

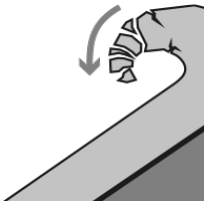
FOR PERIOD 18:00HRS Tue 22/02/2022 TO 18:00HRS Wed 23/02/2022

## THE AVALANCHE HAZARD WILL BE CONSIDERABLE

### Avalanche Hazard Forecast for Wednesday 23/02/2022

### Avalanche Problems

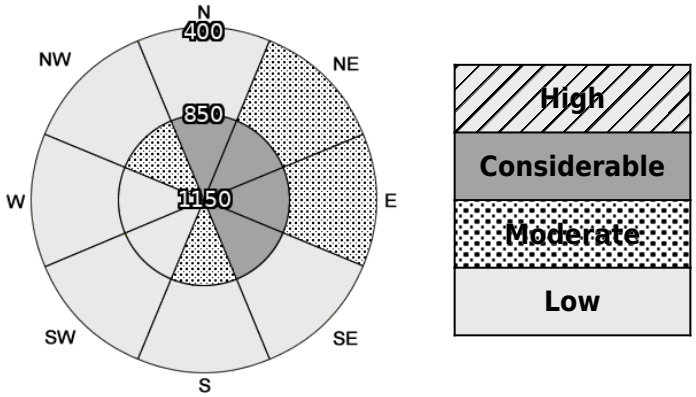
**Wind Slab**



**Cornices**

### Forecast Snow Stability & Avalanche Hazard

Poorly bonded windslab accumulations will persist and continue to accumulate becoming more extensive in wind sheltered locations. Where these deposits gain depth they will be weakly bonded, the greatest accumulations being on steep North through East to South-East aspects above 850 metres. Gullies, scarp slopes, gully exits and steep coire rims will be particularly affected. Fragile cornices will be present above these similar steep aspects. The avalanche hazard will be Considerable.



### Forecast Weather Influences

Overnight, the freezing level will rise from around 400 metres to a 1000 metres then fall again during the day to 400 metres. Light, overnight snow showers above 400 metres will merge into more persistent snow falling mainly above 800 metres during the day. Very strong winds throughout the period mainly from a West-South-Westerly direction.

### Comments

Very windy forecast with more snow arriving.
