Avalanche Hazard Forecast

Issued 24/02/2022

FOR PERIOD 18:00HRS Thu 24/02/2022 TO 18:00HRS Fri 25/02/2022

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 25/02/2022

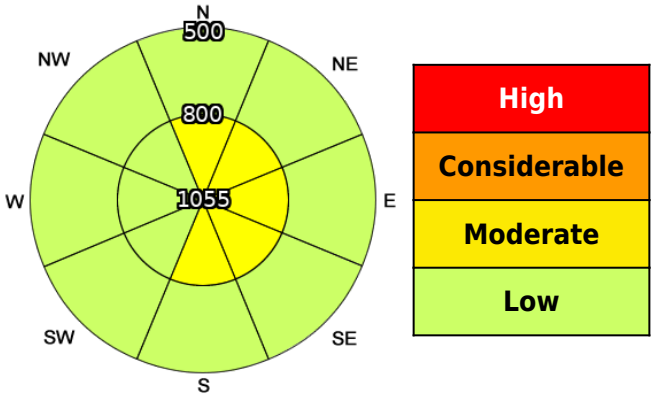
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to accumulate on North through East to South aspects above 800 meters. These instabilities will be mainly present on steep wind sheltered terrain such as coire rims, gully tops and ridge flanks. Cornices will remain fragile on these aspects. Wind exposed aspects will continue to be scoured and generally stable. The avalanche hazard will be Moderate.



Forecast Weather Influences

There will be Strong West-North-West winds overnight veering North-Westerly and decreasing in strength to moderate by the morning, then becoming strong South-South-West. Moderate snowfall is expected overnight, drier during the day. Overnight the freezing level will be at 400 meters, rising to around 700 meters by the end of the forecast period.

Comments

Wintry feel on the hill, lighter winds forecast.
