Southern Cairngorms

Avalanche Hazard Forecast

Issued 29/03/2022

FOR PERIOD 18:00HRS Tue 29/03/2022 TO 18:00HRS Wed 30/03/2022

THE AVALANCHE HAZARD WILL BE LOW

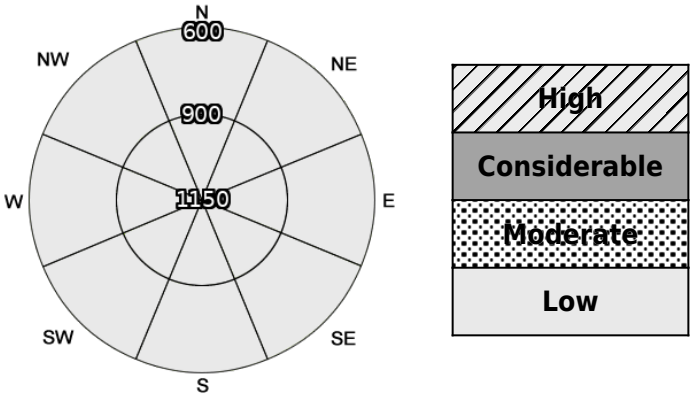
Avalanche Hazard Forecast for Wednesday 30/03/2022

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The majority of the older snow will refreeze, remaining stable and becoming icy in some locations. New unstable areas of windslab will develop over older snow-ice in wind sheltered locations on South-East to South-West aspects above 900 metres. These accumulations will be shallow and are not expected to be widespread. Elsewhere, cover will be best on high North to East facing corries. The avalanche hazard will be Low.



Forecast Weather Influences

A much colder day with the freezing level sub 600 metres for most of the period. Light snow showers will fall on strong North to North-East winds.

Comments

A return to more Wintry conditions. Old snow will become icy again in some locations.
