Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Fri 11/03/2022 TO 18:00HRS Sat 12/03/2022

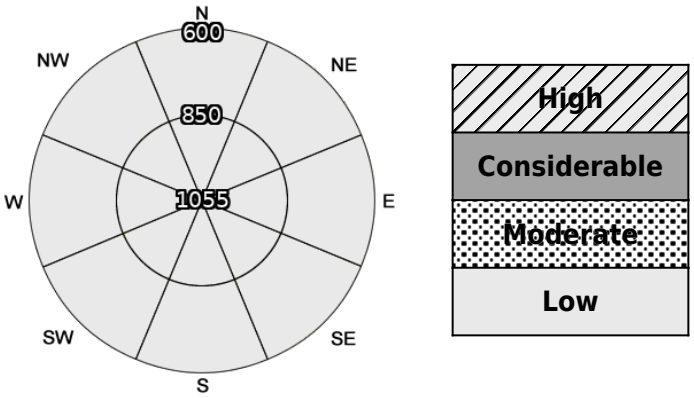
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 12/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain generally well bonded and stable throughout, slowly thawing at lower elevations and refreezing around summit levels. A light dusting of new snow is likely on the higher summits, but will not be in significant amounts. Most snow remains on North, through East to South-East aspects above 700 metres. The avalanche hazard will be Low.



Forecast Weather Influences

The very strong South-East airflow will ease overnight, becoming light to moderate through the day, veering South in the afternoon. There will be light showers throughout the period, with some sleet and snow on the highest summits. Overnight, the freezing level will lower to summit or just below summit level.

Comments

Winds easing tomorrow. The weather will be changeable over the weekend with winds strengthening again by Sunday.
