Avalanche Hazard Forecast

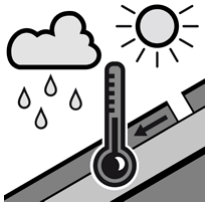
FOR PERIOD 18:00HRS Tue 12/03/2024 TO 18:00HRS Wed 13/03/2024

THE AVALANCHE HAZARD WILL BE MODERATE

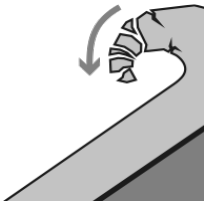
Avalanche Hazard Forecast for Wednesday 13/03/2024

Avalanche Problems

Wind Slab



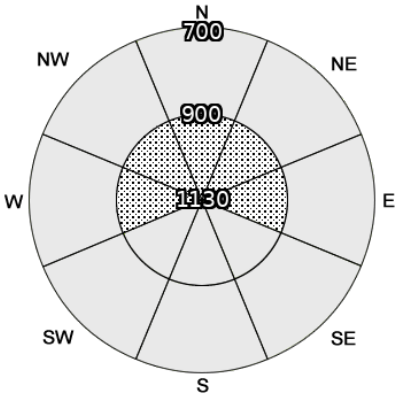
Wet Snow



Cornices

Forecast Snow Stability & Avalanche Hazard

Significant thaw conditions will lead to a period of instability overnight. Wet snow instabilities will be present mainly above 900 metres on West through North to East aspects. Cornices will be weak and prone to collapse. Later, isolated and shallow deposits of windslab will develop on North to East aspects above 900 metres. This will be followed by a stabilising trend throughout the day. The avalanche hazard will be Moderate.



Forecast Weather Influences

Overnight the freezing level will be well above the summits, later dropping to around 900 metres. A period of heavy rain is expected initially, turning to snow on the summits briefly in the morning, then mainly dry through the day. Gale force South-Westerly winds.

Comments

Significant thaw conditions overnight with heavy rain, then a brief spell of summit snow on the back edge of the cold front.
