Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 20/03/2022 TO 18:00HRS Mon 21/03/2022

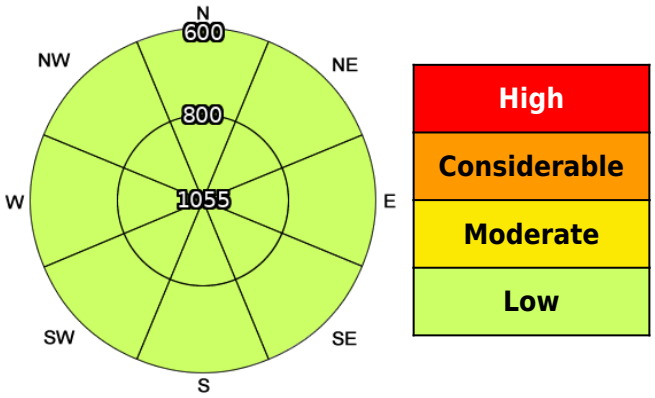
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 21/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

While softening and thawing at all levels the snow pack will remain well bonded and generally stable. Avoidable wet snow instabilities will begin to develop, affecting very steep terrain above 800 meters where the older snow pack has gained depth, mainly on high North through East to Southerly aspects. The avalanche hazard will be Low.



Forecast Weather Influences

The high pressure will maintain dry and settled conditions. The fresh South-South-East winds will reduce in strength this evening veering through South, becoming light South- South-West. The freezing level will be around 1300 to 1400 metres.

Comments

The dry and settled conditions will continue, with the freezing level rising to well above the summits by mid week.
