THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 03/04/2024

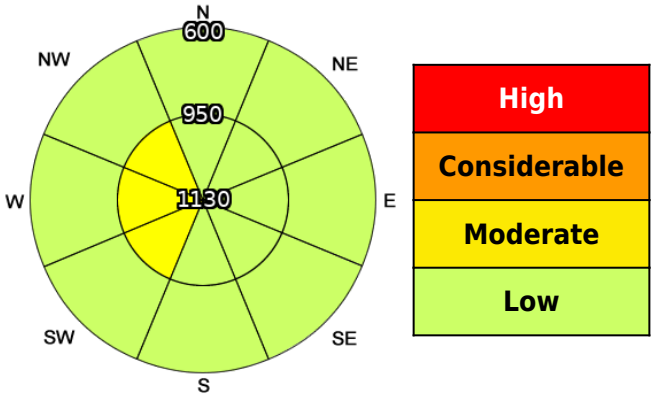
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Additional moderately bonded windslab development expected on steep South-West through West to North-West aspects. New accumulations will be limited to areas above 950m, with gully exits and coire rims being the most affected locations. The older exposed snowpack on North to East aspects above 800m will remain firm and well stabilized. The avalanche hazard will be Moderate



Forecast Weather Influences

Light overnight snow showers then dry. Moderate to strong Easterly airflow. Freezing near summits overnight but becoming cooler during the day.

Comments

Some uncertainty over forecasted snow amounts.
