Southern Cairngorms

Issued 28/03/2022

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 28/03/2022 TO 18:00HRS Tue 29/03/2022

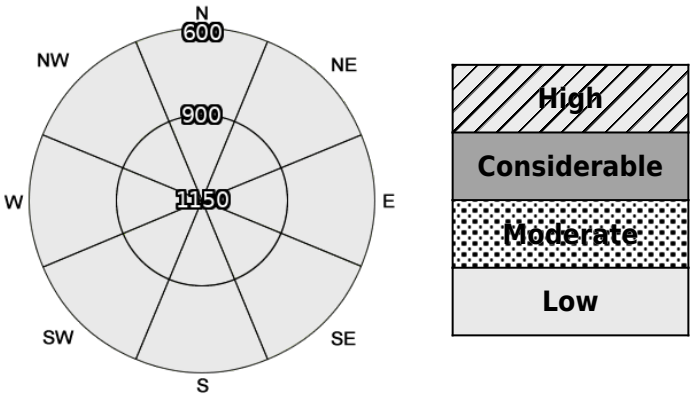
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 29/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The remaining snow is expected to become much firmer by the end of the forecast period. Greatest areas of snow will be found on the highest plateau areas and in North to East facing corries above 900 metres. The avalanche hazard will be Low.



Forecast Weather Influences

As the high pressure declines it will become much cooler with the freezing level dropping in the afternoon to around 600 metres. It is expected to remain dry. Winds strengthening from the North-North-East, becoming fresh by the end of the day.

Comments

A change in conditions. Snow will become much firmer again.
