Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 30/03/2022 TO 18:00HRS Thu 31/03/2022

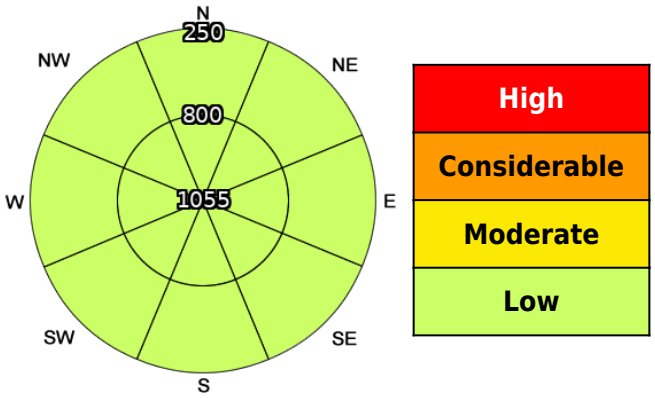
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 31/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing limited snow cover will remain very firm in all locations and will be well bonded and stable throughout. New snow amounts will not be significant and will mostly lie on bare ground. Any deeper accumulations will mainly be found on steep South to South-West aspects above 800 metres and will generally be avoidable. The avalanche hazard will be Low.



Forecast Weather Influences

There will be the chance of a light snow shower at any time throughout the forecast period. It will remain cold with the freezing level lowering to glen level overnight, peaking at 500 metres in the afternoon. The fresh North-Easterly wind will back overnight to a moderate Northerly through the day.

Comments

The cold Arctic Maritime showery airflow will persist. Expect significant windchill on the high summits. The older neve has serious runouts in places.
