Avalanche Hazard Forecast

Issued 01/04/2022

FOR PERIOD 18:00HRS Fri 01/04/2022 TO 18:00HRS Sat 02/04/2022

THE AVALANCHE HAZARD WILL BE MODERATE

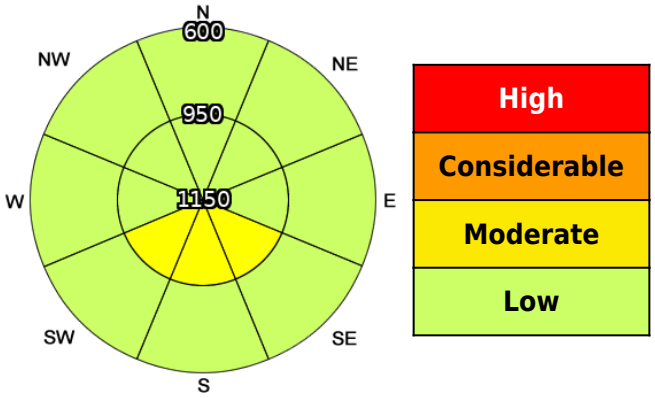
Avalanche Hazard Forecast for Saturday 02/04/2022

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The new snow will start to consolidate as the day progresses. However, instabilities will persist in deeper accumulations above 950 metres on South-East to South-West aspects. Most of these areas will be isolated and avoidable with greatest hazard found on steep terrain around corrie rims and gully tops, mainly on the highest hills along the Northern boundary of this forecast area. Old snow will remain firm and icy. The avalanche hazard will be Moderate.



Forecast Weather Influences

Very light snowfall to all levels overnight. Dry during the day with the freezing level lifting to around 900 metres. Winds generally quite light but strengthening mid afternoon from the North-North-West.

Comments

Old snow remains very firm and icy, often with short run outs onto boulders.
