Avalanche Hazard Forecast

Issued 21/12/2023

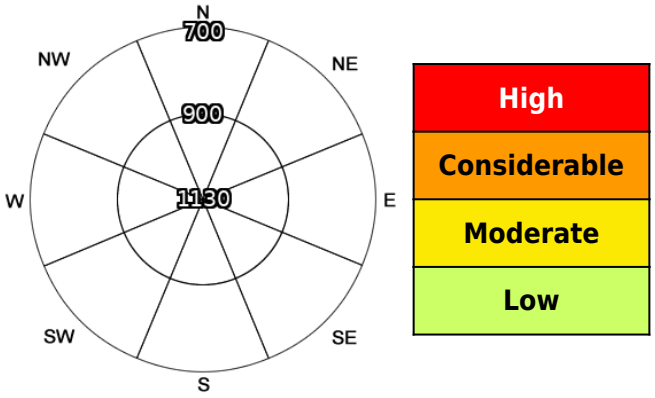
FOR PERIOD 18:00HRS Thu 21/12/2023 TO 18:00HRS Fri 22/12/2023

Avalanche Hazard Forecast for Friday 22/12/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Currently there is insufficient snow cover to present any avalanche hazard and avalanche reports will not be issued for this area until the situation changes. Go to the Blog and Mountain Info for area photos; area info will be provided by SAIS forecasters on a daily basis.



Forecast Weather Influences

Winds will be very strong West-North-Westerly. Scattered light showers are expected, falling as snow mainly above 700 metres. The freezing level will be around 700 metres overnight, briefly rising to 1000 metres around dawn and then 800 metres during the day.

Comments

Very little of yesterday's snow remains after the overnight thaw and rain. Some shallow accumulations of new snow will be deposited in sheltered areas over the next 24 hours, but will mainly form on bare ground and are not expected to be significant.
