Southern Cairngorms

Avalanche Hazard Forecast

Issued 05/04/2022

FOR PERIOD 18:00HRS Tue 05/04/2022 TO 18:00HRS Wed 06/04/2022

THE AVALANCHE HAZARD WILL BE LOW

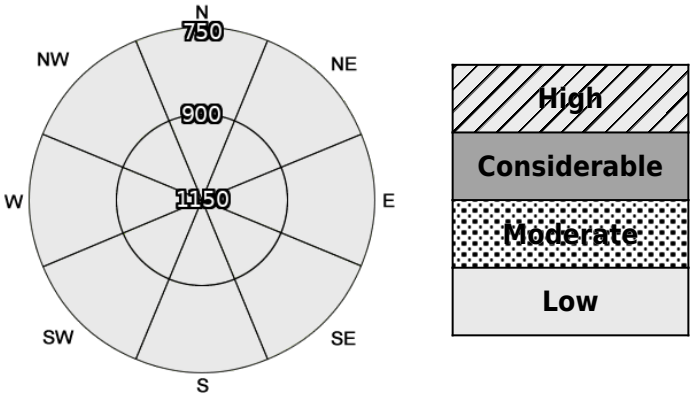
Avalanche Hazard Forecast for Wednesday 06/04/2022

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The old snow will remain well bonded and become firmer as the freezing level drops. New accumulations will start to develop, mainly in wind sheltered East to South aspects above 900 metres but depth and distribution of these deposits will not be extensive. Greatest cover will exist in high North to East facing corries and on the highest plateau areas. The avalanche hazard will be Low.



Forecast Weather Influences

The freezing level will be above the summits before dropping down to 850 metres or so. Rain then snow showers will be light. Strong winds will be South-Westerly during the day.

Comments

Mostly wet snow today. Cooler tomorrow (Wednesday) with light snow expected on the hills.
