Torridon

Avalanche Hazard Forecast

Issued 05/04/2022

FOR PERIOD 18:00HRS Tue 05/04/2022 TO 18:00HRS Wed 06/04/2022

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 06/04/2022

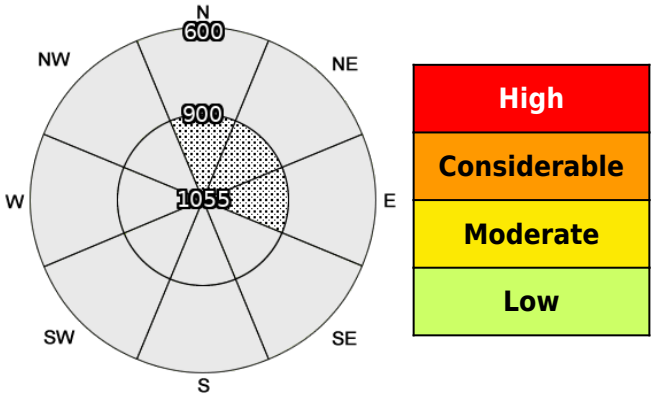
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh unstable windslab will be deposited in wind-sheltered areas. Greatest accumulations will be on North to East aspects above 900 metres. Fragile cornices will start to develop above these aspects. Above 800 metres the surface of the old wet snowpack will refreeze in the colder conditions. The avalanche hazard will be Moderate.



Forecast Weather Influences

Winds will mainly be strong West-South-Westerly or South-Westerly. Precipitation is expected throughout the period, initially falling as rain at all levels, then from around midnight as the freezing level lowers, as snow above about 700 metres.

Comments

It is still winter.
