Avalanche Hazard Forecast

Issued 21/12/2019

FOR PERIOD 18:00HRS Sat 21/12/2019 TO 18:00HRS Sun 22/12/2019

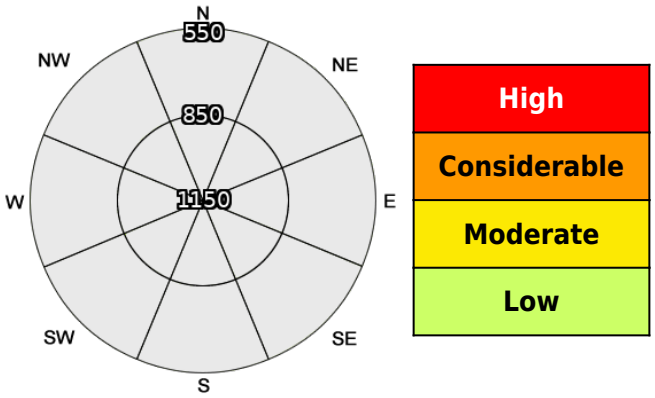
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 22/12/2019

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to consolidate on all aspects above 800 metres and it will remain generally well bonded. Greatest snow amounts are on North-West through North to Easterly aspects above 850 metres. The avalanche hazard will be Low.



Forecast Weather Influences

Freezing levels around 1000 metres. Predominately dry through the period however, very light snow/sleet may fall above 800 metres on isolated occasions but accumulations are not expected to be deep or significant. Winds will be fresh at first then easing in the day from a South-Easterly direction, strengthening later.

Comments

Looking ahead:- A few scattered showers through Sunday evening, becoming more frequent overnight. These will continue, merging into longer spells of rain/snow through Monday and into Tuesday. Showers heavy at times, perhaps with hail and a risk of the odd thunderstorm. Freezing levels generally sitting around 1000-1200m.
