Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 10/01/2024 TO 18:00HRS Thu 11/01/2024

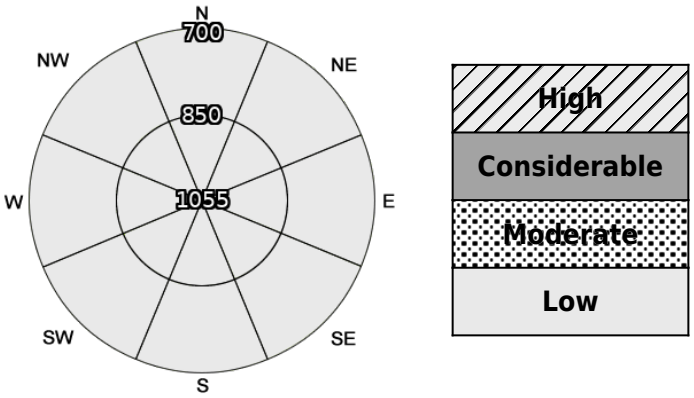
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 11/01/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected and the snowpack will be generally well consolidated and stable, with an overall shallow covering above 750 metres. However, pockets of windslab will remain in wind sheltered locations, mainly steep West to North-West aspects above 850 metres, although amounts are expected to be shallow, isolated and generally avoidable. The avalanche hazard will be Low.



Forecast Weather Influences

It will remain dry, cold and part cloudy throughout the forecast period. The fresh Easterly airflow will gradually moderate, becoming light by the afternoon. The freezing level will remain around 600 metres.

Comments

High pressure will continue to dominate the weather tomorrow, but deteriorating through Friday into Saturday as a weakening band of rain spreads south introducing snow showers and strong winds for a time.
