Lochaber

Avalanche Hazard Forecast

Issued 13/01/2024

FOR PERIOD 18:00HRS Sat 13/01/2024 TO 18:00HRS Sun 14/01/2024

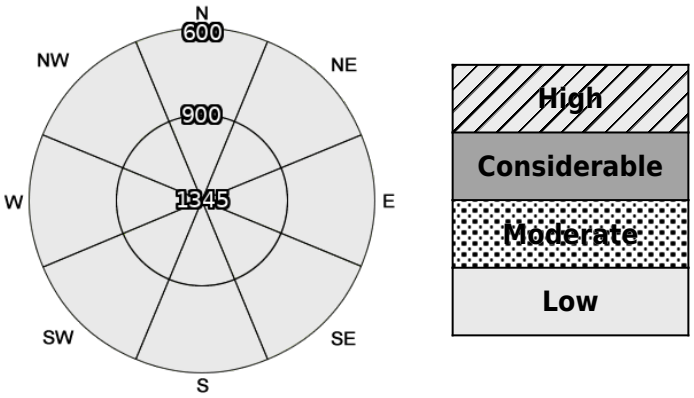
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 14/01/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The older snowpack will remain well bonded and stable. There is the possibility of some localised and shallow accumulations of fresh unstable windslab developing mainly on South-East and South aspects above 900 metres if snow showers forecast for the North-West of Scotland reach Lochaber. The avalanche hazard will be Low.



Forecast Weather Influences

It will be cold with fresh to strong North-North-Westerly winds. Mainly dry with any showers falling as snow to low elevations.

Comments

There is some uncertainty in whether snow forecast for the North-West of Scotland will reach Lochaber and if it does how much. Be aware of fresh unstable windslab accumulations if there is significant snowfall.
