Glencoe

Avalanche Hazard Forecast

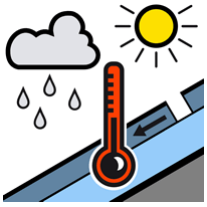

Issued 27/01/2022

FOR PERIOD 18:00HRS Thu 27/01/2022 TO 18:00HRS Fri 28/01/2022

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 28/01/2022

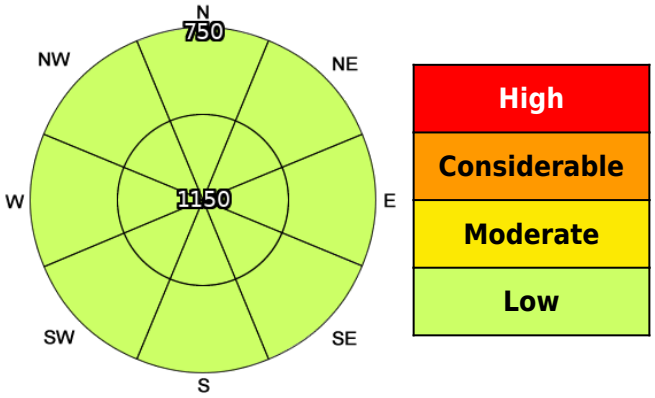

Avalanche Problems

Wet Snow

Forecast Snow Stability & Avalanche Hazard

The older snowpack will remain well bonded and stable. Wet snow instabilities will occur in the thin covering of recent snow when the temperature rises during the day but these will not be significant. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight it will be dry with Moderate South-West winds and a freezing level around 800 metres. During the day the wind will become strong, the freezing level will rise above the summits and precipitation initially falling as snow on the higher summits will soon turn to rain at all levels.

Comments

Snowpack patchy with best cover on high North to East aspects.
