Southern Cairngorms

Avalanche Hazard Forecast

Issued 19/03/2023

FOR PERIOD 18:00HRS Sun 19/03/2023 TO 18:00HRS Mon 20/03/2023

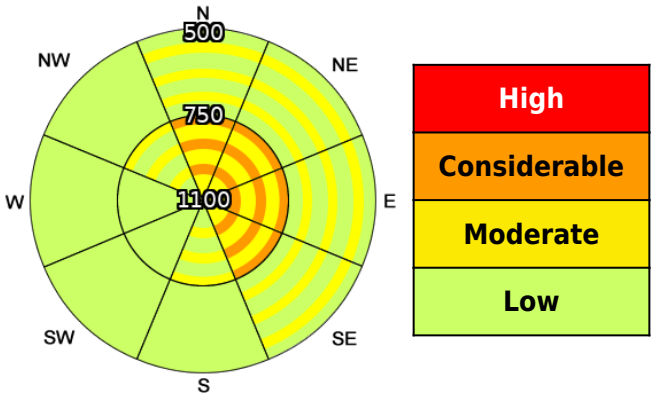
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 20/03/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There will be a thin, general covering of new snow above 700 metres which will rapidly thaw during the day. The patchy snow cover will be well bonded and stable with surface layers softening in the milder conditions, especially at lower elevations. More extensive areas of snow will be encountered above 900 metres, most frequently on the high mountains of the main Cairngorm plateau. The avalanche hazard will be Low.



Forecast Weather Influences

Limited snowfall overnight on light Southerly winds. Mainly dry during the day with the winds gradually increasing to become moderate South-South-Easterly by the end of the afternoon. 800 metre freezing level during the late evening, rapidly rising to above the summits overnight.

Comments

Remaining unsettled with multiple weather fronts pushing through.
