Avalanche Hazard Forecast

Issued 19/12/2023

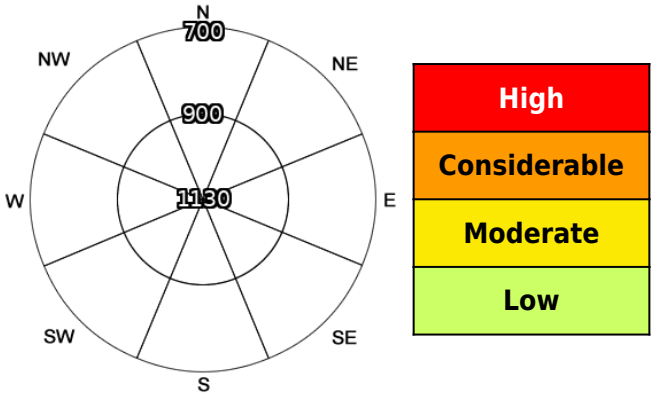
FOR PERIOD 18:00HRS Tue 19/12/2023 TO 18:00HRS Wed 20/12/2023

Avalanche Hazard Forecast for Wednesday 20/12/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Currently there is insufficient snow cover to present any avalanche hazard and avalanche reports will not be issued for this area. Go to the Blogs and Mountain info for area photos; area info will be provided by SAIS forecasters on a daily basis.



Forecast Weather Influences

Strong Westerly or West-North-West winds and overnight snow showers turning to rain at all altitudes in the morning. Cold overnight but progressively milder from daybreak onwards.

Comments

Isolated accumulations of new windslab are possible on very sheltered North East through East to South East aspects above 900m. Any new windslab will form on bare or rocky ground and is not expected to present an avalanche hazard. Rainfall and mild temperatures at all levels will melt most of the snow cover by dusk.
