THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 29/01/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Any remaining patches will be stable. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight the winds will be storm force South-Westerly accompanied by rain at all levels with the freezing level well above the summits. During the morning the winds will begin to decrease in strength as they veer North-Westerly. The freezing level will drop to summit level around dawn and further to 600 metres by the end of the forecast period. Any light showers during the day will be of snow on the highest summits.

Comments

There is next to no snow. Blog pictures from last two days give good impression of current situation.
