Avalanche Hazard Forecast

Issued 21/12/2023

FOR PERIOD 18:00HRS Thu 21/12/2023 TO 18:00HRS Fri 22/12/2023

THE AVALANCHE HAZARD WILL BE LOW

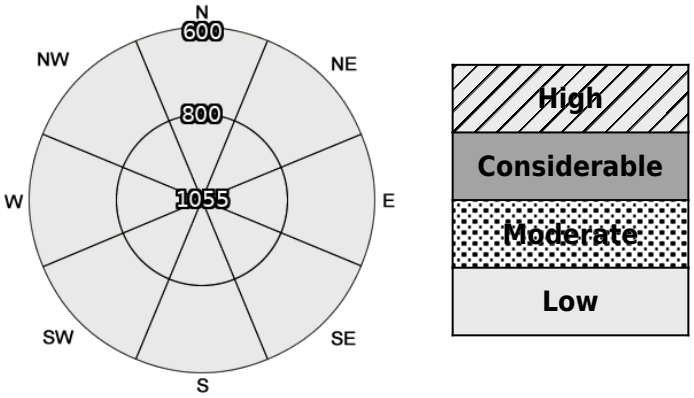
Avalanche Hazard Forecast for Friday 22/12/2023

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

In most areas there will be a thin covering of fresh snow on bare ground. Localised areas of new unstable windslab will develop on North-East through East to South aspects above 750 metres. These accumulations are not expected to be extensive and will generally overlie bare ground. Areas most affected will be wind sheltered areas such as coire rims and gully tops. The avalanche hazard will be Low.



Forecast Weather Influences

Snow showers throughout the period will fall as snow above around 600 metres. Very strong West-North-Westerly winds. The freezing level will be around 700 metres with a slightly warmer spell around dawn.

Comments

Some uncertainty in snowfall amounts with a large variation possible across the area. Also some uncertainty around wether there will be a brief rise in temperature around dawn.
