Avalanche Hazard Forecast

Issued 24/12/2023

FOR PERIOD 18:00HRS Sun 24/12/2023 TO 18:00HRS Mon 25/12/2023

THE AVALANCHE HAZARD WILL BE LOW

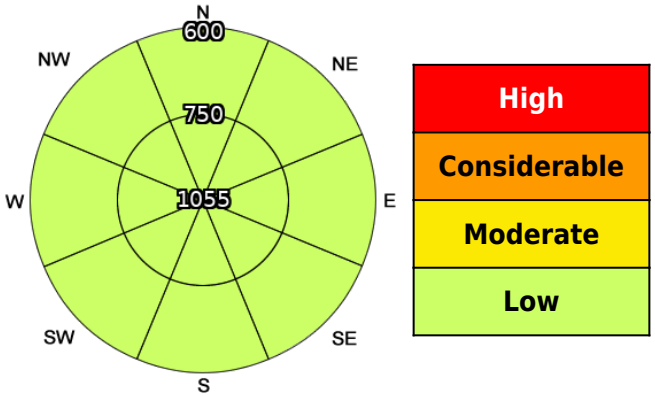
Avalanche Hazard Forecast for Monday 25/12/2023

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Isolated pockets of fresh windslab will develop on mostly North through East to South-Easterly aspects above 800 meters. Most of the new snow will lie on bare, wet ground and present no significant hazard. The avalanche hazard will be Low.



Forecast Weather Influences

The Westerly gales are expected to ease before turning strong South to South-West on Christmas Day morning then North to North-Westerly later. Light snow showers expected during daylight hours (heavier snow showers expected in the East of the area). The freezing level will be around 600 - 800 meters.

Comments

Rivers/burns in spate with thaw conditions and heavy rain showers. Freezing level dropping overnight with some snow expected on the tops bringing a 'White Christmas' for the North West Highlands?
