Avalanche Hazard Forecast

Issued 25/12/2023

FOR PERIOD 18:00HRS Mon 25/12/2023 TO 18:00HRS Tue 26/12/2023

THE AVALANCHE HAZARD WILL BE LOW

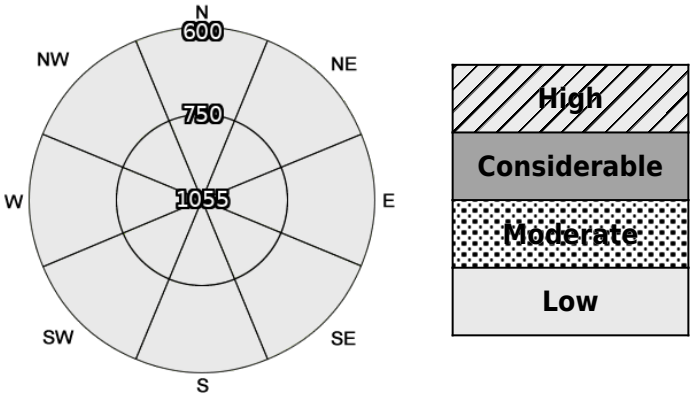
Avalanche Hazard Forecast for Tuesday 26/12/2023

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Isolated pockets of fresh windslab will develop on mostly East through South to Westerly aspects above 800 meters. These accumulations are expected to be shallow and will be confined to gully tops and corrie rims. Elsewhere, the new snow will lie on bare, wet ground and present no significant hazard. The avalanche hazard will be Low.



Forecast Weather Influences

Moderate North-Easterly winds back through North to West and increase to Strong overnight before easing and backing West-South-West by the end of the day. Light snow showers expected late evening and during Tuesday morning. The freezing level will be around 500-600 meters.

Comments

A deepening depression will bring widespread heavy snow northwards through Wednesday, accompanied by strong to gale force North Easterly winds leading to blizzards for a time.
