

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 30/01/2022

Avalanche Problems

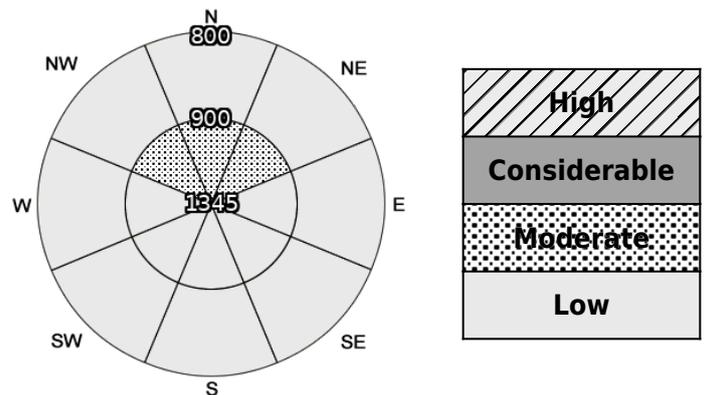

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will be well bonded, firm and stable. From around midday localised accumulations of fresh unstable windslab will start to develop, mainly affecting North-West to North-East aspects above 900 metres. Accumulations are only expected to gain significant depth in wind sheltered locations such as gullies and coire rims. Fragile cornices will start to develop above these locations. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will be dry and cold overnight and during the first part of the morning before storm Corrie approaches. From midday snow showers will develop turning heavier through the afternoon, Southerly winds will increase to very strong and the freezing level will rise from 500 metres to 900 metres.

Comments

Snow continuing into Sunday evening, a cold day on Monday before another mild spell on Monday night.
