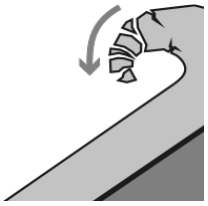
Avalanche Hazard Forecast for Thursday 28/12/2023

Avalanche Problems

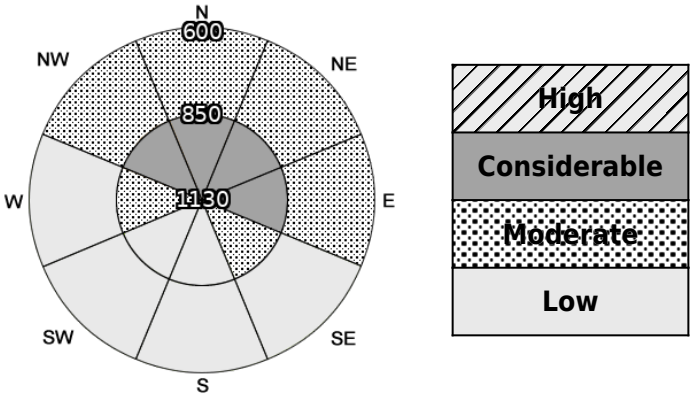
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will become increasingly widespread on North-West through North to East aspects above 850 metres, where avalanches are likely. There is potential for crossloading on other aspects. Wind sheltered locations such as gully tops, coire rims and steep banks will be most affected. Fragile cornices will continue to develop. Wind exposed areas will become progressively scoured. The avalanche hazard will be Considerable.



Forecast Weather Influences

Strong South-Westerly winds with frequent showers, falling as snow above 800 metres. The freezing level will hover around 800 metres throughout the forecasting period.

Comments

Remaining wintry with frequent showers and windy conditions. Expect blizzard conditions above 800m.
