

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Monday 31/01/2022****Avalanche Problems****Wind Slab****Forecast Snow Stability & Avalanche Hazard**

Initially, unstable windslab accumulations will be present on North-West to North-East aspects before being redistributed onto East to South-East aspects above 1000 metres. The greatest instability will be mostly confined to steep wind sheltered terrain features such as the tops of gullies, crag aprons and below coire rims. Elsewhere the old snowpack will remain firm well bonded and stable. The avalanche hazard will be Moderate

**High****Considerable****Moderate****Low****Forecast Weather Influences**

Snowfall during the night on storm force South-West veering North-Westerly winds. A dry day will follow and the winds will ease to strong and back to become West-North-Westerly. The 800 metre freezing level will fall to 400 metres overnight, later rising steadily to 700 metres.

Comments

Cold and windy during Monday, turning milder through Monday evening.
