Torridon

Avalanche Hazard Forecast

Issued 30/01/2022

FOR PERIOD 18:00HRS Sun 30/01/2022 TO 18:00HRS Mon 31/01/2022

THE AVALANCHE HAZARD WILL BE MODERATE

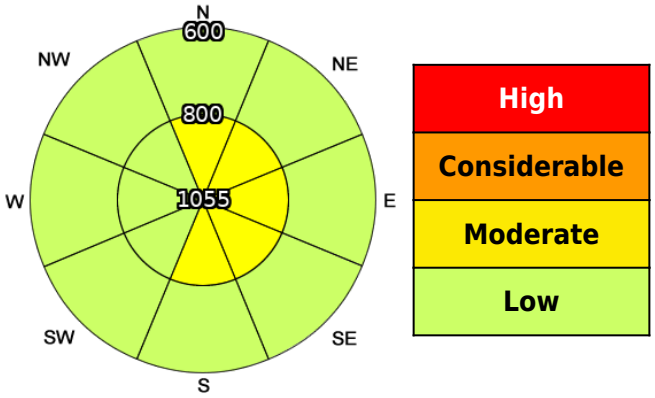
Avalanche Hazard Forecast for Monday 31/01/2022

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The remaining patchy older snow will be firm and stable. There will be a redistribution of snow with windslab developing on North-East through East to South aspects at first. As the wind backs instabilities will begin to affect North to East aspects above 800 metres. These windslab instabilities will affect steeper wind sheltered terrain such as coire rims, the tops of gullies and ridge flanks. There will be some scouring on wind exposed slopes. The avalanche hazard will be Moderate.



Forecast Weather Influences

There will be storm force West-North-West winds at first becoming North-West overnight reducing in strength becoming strong West-South-West. Moderate snow showers are expects with heavier showers further inland. The Freezing level will lower to around 200 metres and gradually rise tomorrow to around 800 metres.

Comments

Showers will die out on Monday as a ridge of high pressure builds for a time over Scotland.
