Southern Cairngorms

Avalanche Hazard Forecast

Issued 30/01/2022

FOR PERIOD 18:00HRS Sun 30/01/2022 TO 18:00HRS Mon 31/01/2022

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 31/01/2022

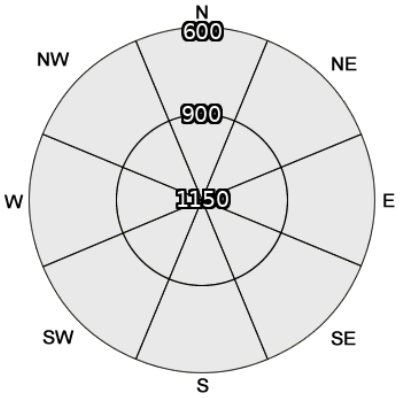

Avalanche Problems

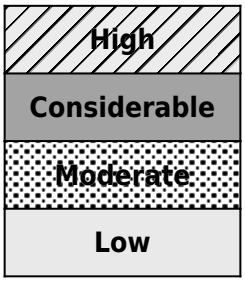

Wind Slab

Forecast Snow Stability & Avalanche Hazard

New snowfall will mostly fall onto bare ground. However, new areas of windslab will develop over older snow-ice mainly on North-East to South-East aspects above 900 metres. These areas are expected to be limited in distribution with gully exits, scarp slopes and corrie rims mainly affected. The avalanche hazard will be Low.

Forecast Weather Influences

Snow at all levels overnight but dry thereafter with the freezing level rising to around 650 metres during the day. Winds will be strongest overnight, initially from the South-West but veering to the North-West and easing throughout the day.

Comments

Poor weather overnight. Some fluctuation in the freezing level Monday onwards.
