Avalanche Hazard Forecast

Issued 30/12/2023

FOR PERIOD 18:00HRS Sat 30/12/2023 TO 18:00HRS Sun 31/12/2023

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 31/12/2023

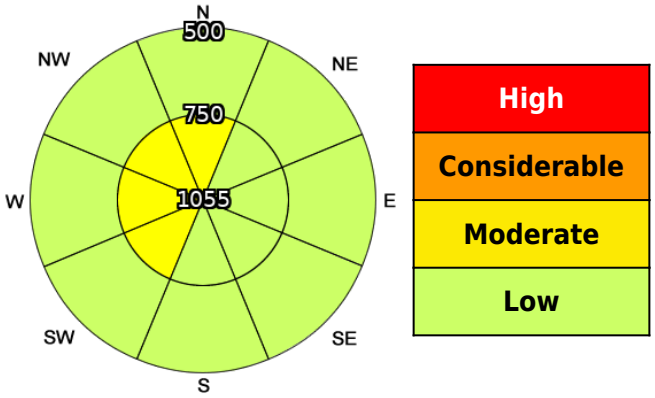
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised accumulations of unstable windslab will persist mainly on South-West through West to North aspects above 750 metres. Steep wind sheltered areas such as gullies and coire rims will be most affected. Cornices are possible above these aspects. Elsewhere slopes exposed to the recent winds will be scoured and stable. The avalanche hazard will be Moderate.



Forecast Weather Influences

Snow above 600 metres in the early evening will clear to give dry conditions overnight and throughout the day. Fresh East-South-Easterly winds will decrease slightly. The temperature at 900 metres will be around -1 degrees celcius.

Comments

Localised variation in snow amounts. In particular more snow further inland and less snow on the more coastal mountains.
