Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 01/01/2024 TO 18:00HRS Tue 02/01/2024

THE AVALANCHE HAZARD WILL BE MODERATE

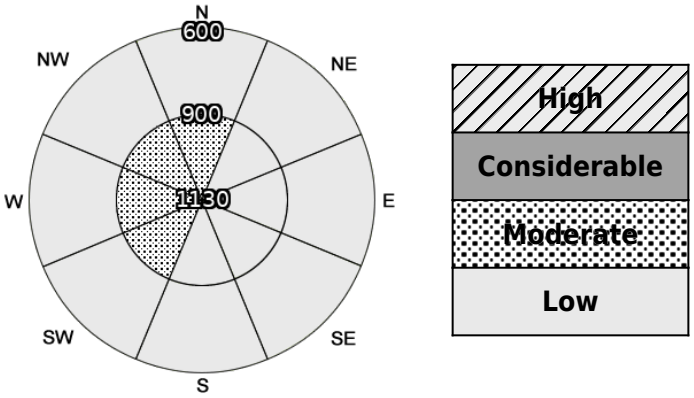
Avalanche Hazard Forecast for Tuesday 02/01/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised areas of windslab will develop on South-West through West to North aspects mainly above 900 metres. This will mainly affect areas such as gully tops, steep corrie headwalls and the leeward side of ridge crests. Fragile cornices will build on these same aspects. The snowpack elsewhere will be generally consolidated and stable. The avalanche hazard will be Moderate.



Forecast Weather Influences

East-South-East winds increasing to Gale force overnight, easing and veering to Fresh South-Easterlies by late morning. Light snow showers expected after 4am. Overnight the freezing level will be around 600-800 metres, rising to summit level by mid-day.

Comments

Another day of challenging underfoot conditions. Icy on the tracks and breakable crust off the track.
