Southern Cairngorms

Issued 31/01/2022

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 31/01/2022 TO 18:00HRS Tue 01/02/2022

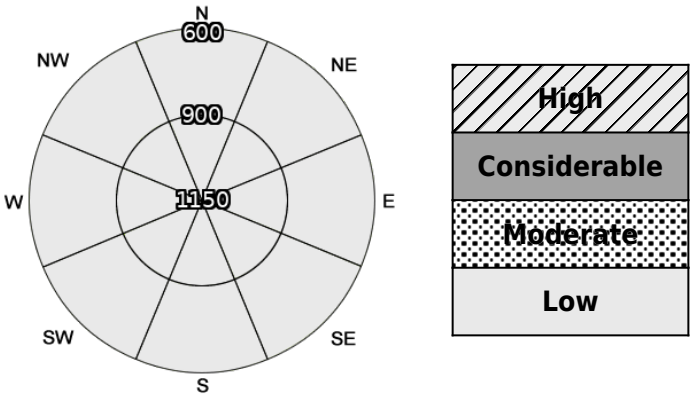

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 01/02/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Thaw conditions will become established overnight. The isolated and mostly avoidable accumulations of windslab that had formed on North-East through East to South aspects above 900 metres will continue to consolidate. These will become well bonded and stable as colder conditions return later. Elsewhere terrain will be mostly bare. The avalanche hazard will be Low

Forecast Weather Influences

Insignificant precipitation overnight will be followed by a dry day. Winds severe gale force West-North-Westerly throughout. Freezing level rising above all summits overnight lowering to 800m by the end of the day.

Comments

Remaining very windy with difficult mountain conditions.
