Torridon

Avalanche Hazard Forecast

Issued 01/01/2024

FOR PERIOD 18:00HRS Mon 01/01/2024 TO 18:00HRS Tue 02/01/2024

THE AVALANCHE HAZARD WILL BE LOW

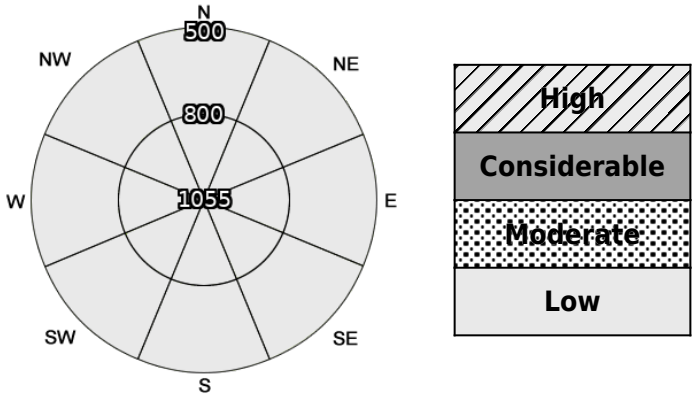
Avalanche Hazard Forecast for Tuesday 02/01/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Shallow deposits of fresh windslab will build during the early hours and through the morning, in localised steep wind sheltered terrain, mainly West to North aspects, above 650 metres initially, but confined to the summits later. Amounts are not expected to be significant. Elsewhere, the snowpack will have good stability, thawing at all levels by the end of the period. The avalanche hazard will be Low.



Forecast Weather Influences

Dry and cold overnight with light snow and snow showers expected through the day, above 600 metres initially, turning to rain and sleet at all levels by the end of the period as the freezing level rises to 1100 metres. Strengthening East to South-East winds will peak overnight with summit gales, gradually easing through the day.

Comments

A weakening front will cross the Torridon area during the morning with milder air following behind. Outlook - remaining unsettled.
