Avalanche Hazard Forecast

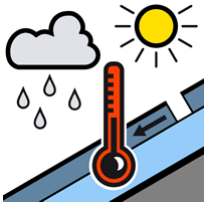
Issued 15/02/2024

FOR PERIOD 18:00HRS Thu 15/02/2024 TO 18:00HRS Fri 16/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 16/02/2024

Avalanche Problems

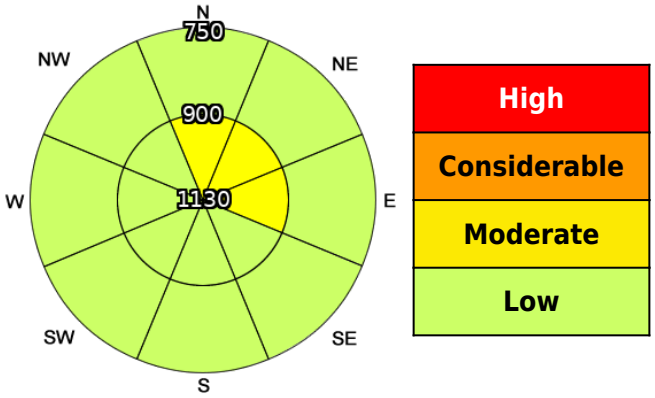


Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will be moist, continue to thaw and gradually consolidate in most areas. However, localised instabilities will persist in deeper accumulations primarily on Northerly to Easterly aspects above 900 metres, with steep terrain such as coire rims and gully tops most affected. Any remaining cornices will be unstable and prone to collapse. The avalanche hazard will be Moderate.



Forecast Weather Influences

It will be a mainly dry day with only a little overnight rain expected. The freezing level will remain above the summits. Strong South-Westerly winds will steadily veer and become North-Westerly and decrease to light by the end of the forecasting period.

Comments

The thaw conditions are expected to continue into the weekend with the freezing level remaining above the summits. Beware of rock and ice fall.
