Avalanche Hazard Forecast

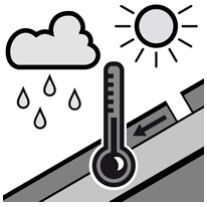
Issued 16/02/2024

FOR PERIOD 18:00HRS Fri 16/02/2024 TO 18:00HRS Sat 17/02/2024

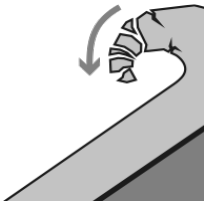
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 17/02/2024

Avalanche Problems



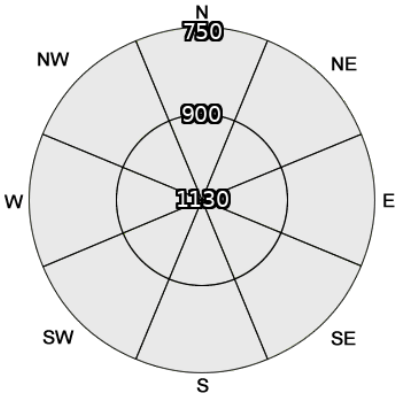
Wet Snow



Cornices

Forecast Snow Stability & Avalanche Hazard

Stability is generally good. The snowpack will continue to slowly consolidate and thaw. Isolated wet snow instabilities will be present where recent soft snow meets the older firm layer, primarily on Northerly to Easterly aspects above 900 metres, with steep terrain such as coire rims and gully tops being most affected. Any remaining cornices will be unstable and prone to collapse. The avalanche hazard will be Low.



Forecast Weather Influences

The freezing level will remain above the summits. It will be dry during the morning with light rain arriving on Saturday afternoon. Light South-Easterly winds will steadily increase overnight and through the day to become strong.

Comments

Freeze-thaw cycles expected into next week.
