Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Tue 20/02/2024 TO 18:00HRS Wed 21/02/2024

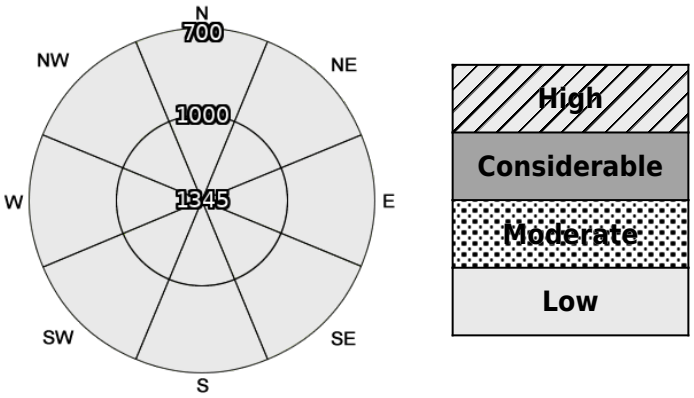
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 21/02/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will remain well consolidated and stable in the fluctuating temperatures. The greatest deposits will be found on high North to East aspects. There may be some isolated, very shallow and avoidable deposits of fresh snow during the day. These are not expected to be significant. The avalanche hazard will be Low.



Forecast Weather Influences

It will be dry overnight with the freezing level around 800 metres. During the morning the freezing level will rise above the summits before dropping again to around 800 metres through the afternoon. Some precipitation, mainly falling as rain, is expected during the day. Gale force winds will be from the South.

Comments

A return to more sustained cool/cold conditions expected later in the week.
