Avalanche Hazard Forecast

Issued 04/01/2024

FOR PERIOD 18:00HRS Thu 04/01/2024 TO 18:00HRS Fri 05/01/2024

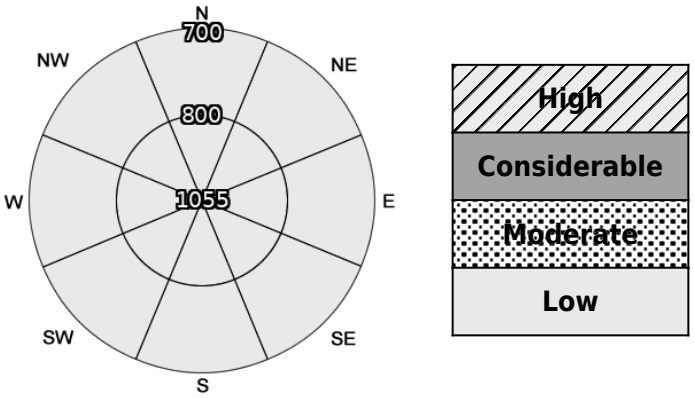
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 05/01/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The moist but stable snowpack that exists in localised places, mainly on South-West through West to Northerly aspects above 800 metres will gradually become more firm during the day. Greatest amounts lying in gullies, coire rims and ridge flanks. New accumulations of fresh snow will be mostly a thin dusting and of no consequence. The avalanche hazard will be Low.



Forecast Weather Influences

Winds will be fresh to strong South-Westerly overnight becoming Westerly during the day. Freezing levels will remain around 1000 metres overnight gradually lowering to 800 metres by the end of the day. Precipitation will be light showers falling as sleet or snow at summits at first, then providing a light dusting of snow above 800 metres during the day.

Comments

Getting colder during the day
