Torridon

Avalanche Hazard Forecast

Issued 24/02/2024

FOR PERIOD 18:00HRS Sat 24/02/2024 TO 18:00HRS Sun 25/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

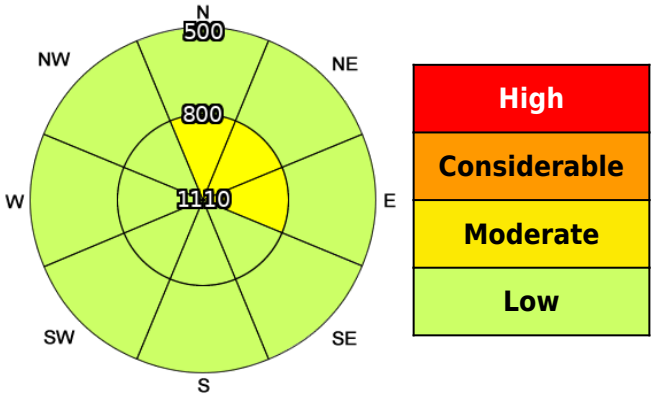
Avalanche Hazard Forecast for Sunday 25/02/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

In general, the snow cover will be stable, shallow and mainly lie on bare ground. However, weaknesses will persist in deeper pockets of windslab that remain in steep locations, largely above 800 metres on North to East aspects. Terrain most affected will be tops of gullies, coire rims and ridge flanks, particularly where the windslab overlies firm old snow. The avalanche hazard will be Moderate.



Forecast Weather Influences

It will be a largely dry, part cloudy day, but thickening cloud late afternoon may bring a few flakes of snow. Light Southerly winds initially will gradually back North and freshen through the day. The freezing level will rise to around 600 metres by the end of the period.

Comments

Looking reasonably settled over the next couple of days. Good winter walking conditions.
