Avalanche Hazard Forecast

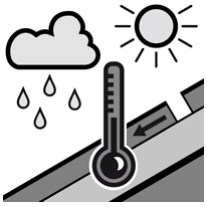
Issued 27/02/2024

FOR PERIOD 18:00HRS Tue 27/02/2024 TO 18:00HRS Wed 28/02/2024

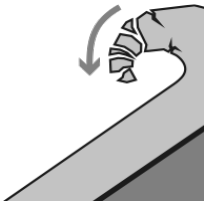
THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 28/02/2024

Avalanche Problems



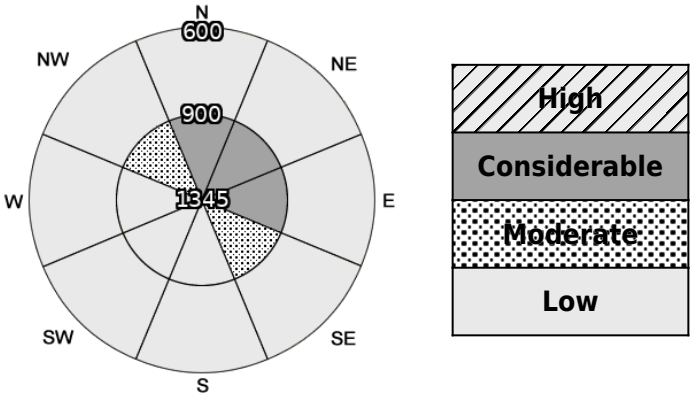
Wet Snow



Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will persist overnight on mainly North to East aspects above 900 metres. As the freezing level rises above the summits the snowpack will go through a period of instability. Cornices will be prone to collapse. At lower elevations the snowpack will continue to thaw and will be generally stable. The avalanche hazard will be Considerable.



Forecast Weather Influences

Mainly dry overnight with snow and increasingly rain during the day as the freezing level rises from around 850 metres to above the summits. Fresh to strong winds vary from South to South-Westerly in direction.

Comments

Rising temperatures with wet snow instabilities.
