Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Tue 09/01/2024 TO 18:00HRS Wed 10/01/2024

THE AVALANCHE HAZARD WILL BE LOW

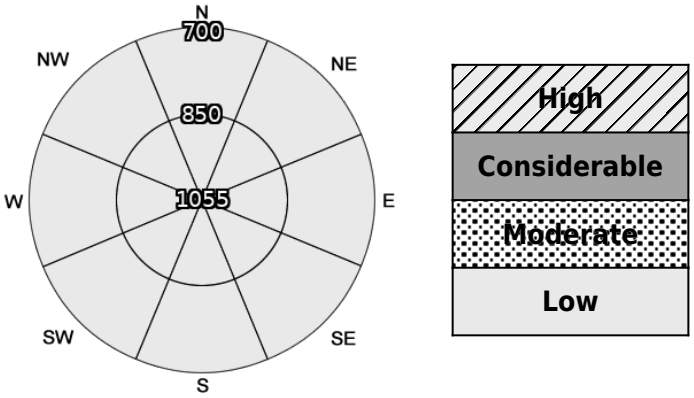
Avalanche Hazard Forecast for Wednesday 10/01/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

In general, the snowpack will remain shallow and stable with a soft surface layer overlying a firm base and a good overall cover above 750 metres. However, due to wind redistribution, fresh localised areas of windslab will continue to build on steep sheltered West to North aspects above 850 metres. Terrain most affected will be tops of gullies and scarp slopes. The avalanche hazard will be Low.



Forecast Weather Influences

It will be a dry, part cloudy day, with light South-Easterly winds overnight, freshening and backing North-East by the afternoon. Multiple temperature inversions expected although freezing at all levels initially, rising to around 650 metres in the afternoon.

Comments

High pressure will remain in charge over the next few days, bringing mainly dry and settled conditions, but with a bit more cloud expected.
