

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 03/02/2022

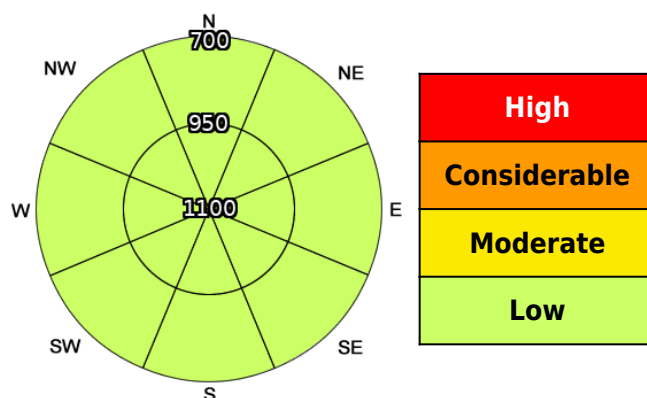

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Late in the forecast period isolated accumulations of windslab will develop on North to East aspects above 900 metres. This will mainly affect areas such as steep corrie headwalls, gully exits, and high wind sheltered locations. Only where this achieves depth is it expected to present a hazard. On other aspects and at lower elevations, the fresh snow will lie on saturated, bare ground. The avalanche hazard will be Low.

Forecast Weather Influences

Gale force West-South-West winds are expected. Rain expected throughout the day only falling as sleety snow on the highest tops. Late afternoon brings a significant drop in the temperature and snow is expected to fall to as low as 400 meters.

Comments

A wet and windy day ahead. The freezing level drops late afternoon when the rain will turn to snow above around 400m.
