Avalanche Hazard Forecast

Issued 01/03/2024

FOR PERIOD 18:00HRS Fri 01/03/2024 TO 18:00HRS Sat 02/03/2024

THE AVALANCHE HAZARD WILL BE MODERATE

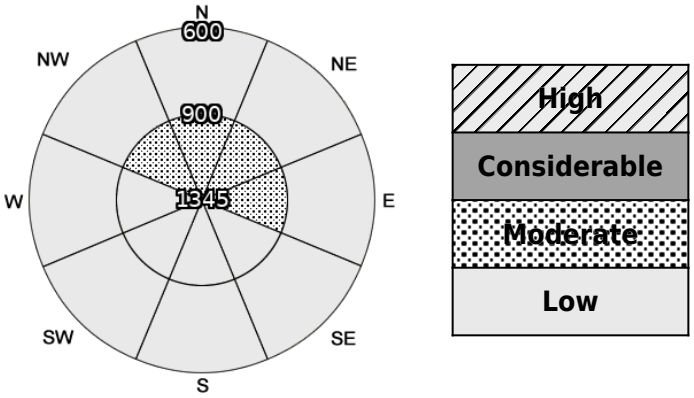
Avalanche Hazard Forecast for Saturday 02/03/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Moderately bonded windslab will be found on North-West through North to East aspects above 900 metres. Areas most affected will be steep wind sheltered locations such as gully tops, crag aprons and coire headwalls. Below this height, fresh snow will be mainly overlying bare ground. The existing old snowpack will be firm and well bonded. The avalanche hazard will be Moderate.



Forecast Weather Influences

It will be a dry and settled day, with the possibility of the odd light snow shower. Fresh North-Easterly winds will ease throughout the period. The freezing level will fluctuate around 600 metres.

Comments

Wind exposed locations are generally scoured with most fresh snow located around mid mountain height. Large areas of very firm and icy snow exist with serious consequences of any trips.
