Avalanche Hazard Forecast

Issued 12/01/2024

FOR PERIOD 18:00HRS Fri 12/01/2024 TO 18:00HRS Sat 13/01/2024

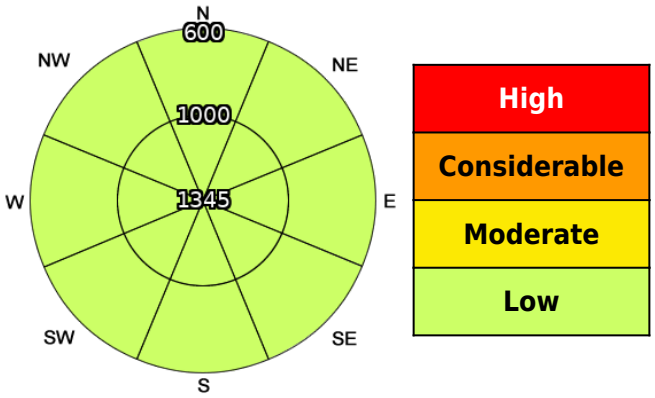
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 13/01/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Below around 900 metres the snowpack will become moist and slowly thaw. Above this altitude the surface of the snowpack will become wet overnight before freezing and forming a crust through the day. Stability will remain generally good throughout. The avalanche hazard will be Low.



Forecast Weather Influences

A bit of a change is expected. Overnight the freezing level will rise to around 1300 metres overnight before being around 900 metres through the day. After some overnight drizzle a generally dry day is expected. A fresh breeze will be from the North-West.

Comments

Water ice on paths and some very hard snow ice in exposed locations remain a hazard.
