Avalanche Hazard Forecast

Issued 12/01/2024

FOR PERIOD 18:00HRS Fri 12/01/2024 TO 18:00HRS Sat 13/01/2024

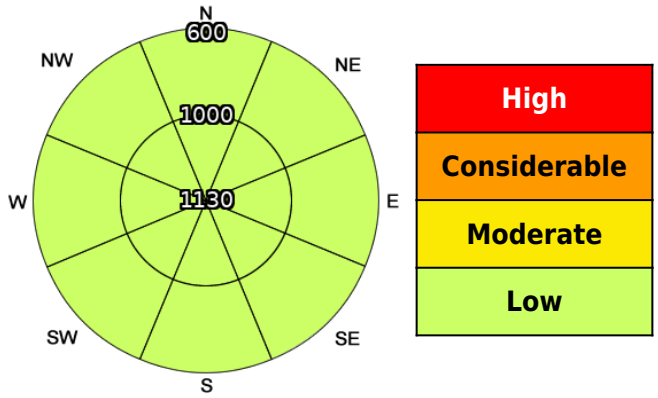
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 13/01/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain generally stable. New snow deposits are not expected to be significant. Below around 800 metres the surface will start to melt. Above this there will be a brief thaw and then refreeze. The avalanche hazard will be Low.



Forecast Weather Influences

Winds will be very strong Westerly overnight and strong West-North-Westerly during the day. Overnight several hours of very light precipitation is expected, initially falling as snow above around 950 metres, then briefly as sleet on highest summits as the freezing level rises above all summits for a few hours. During the day the freezing level will be around 800 metres and it will be dry.

Comments

Ice on watercourses, with patches on paths and hillsides.
